

thoroughly air this constitutional proposal as well as perhaps pass the bill at the same time because clearly we would want to be able to restrict future Congresses' ability to raise taxes.

Mr. President, the bottom line here is, yes, we need to focus on balancing the budget, on pinching pennies, and on saving in every way we can so we are not spending taxpayer dollars unwisely. That has been our focus all this year. We came close to getting a balanced budget agreement, but we did not quite do it. It would still be nice, if we could. Since we have not been able to, I think we have to focus equally on the other side. How do we get the economy growing again, moving forward, providing opportunity for growth, for job creation, for entrepreneurship, and for capital infusion for the economy. And the best way to do that is to follow the recommendations of the Kemp Commission—to give everybody a better opportunity by having a simpler, fairer, single-rate Tax Code.

I look forward to this debate in the ensuing weeks and months. I hope many of my colleagues will join me in sponsorship of the constitutional amendment to require a two-thirds vote to approve any income tax rate increases.

Mr. INHOFE addressed the Chair.

The PRESIDING OFFICER. The Senator from Oklahoma.

Mr. INHOFE. I ask unanimous consent to be recognized to speak as if in morning business.

The PRESIDING OFFICER. Without objection, it is so ordered.

THE TAX CODE

Mr. INHOFE. Mr. President, first of all, let me stand up and be the first one to officially accept the challenge made by the distinguished Senator from Arizona. He is absolutely correct in his analysis as to what is happening in the country right now. It is refreshing to listen to someone who can look at historical data and come to a decision that is really incontrovertible.

The Senator from Arizona quoted the Kemp report as to what can happen in order to stimulate the economy and actually result in increasing revenues by reducing marginal tax rates. If we think back and look at what happened in 1980, the total revenues derived from our marginal tax rates was \$244 billion. In 1990, it was \$466 billion. And during that 10-year period, we had a greater reduction in marginal rates, including capital gains. Obviously, what happened is exactly what the Senator is suggesting would happen in the future if we would we do this now.

I have heard so many times on this floor people say look what happened in the 1980's when we had a President who was reducing tax rates and the deficit went up. The deficit went up not because revenues were not coming in. Clearly they were coming in at a much more rapid rate as a result of giving the free enterprise system a chance to breathe by reducing marginal rates.

THE MISSILE THREAT

Mr. INHOFE. I wanted to take just a moment, Mr. President, to mention something else that will be very dear to the heart of our previous speaker, Senator JOHN KYL, from Arizona. I am sure, since he was quoted in the article that I am about to quote, that he shares my concern over an article that appeared in the Washington Times yesterday entitled "Missile Threat Report Politicized, GOP Says."

I will just read the first paragraph of this article. It says:

A new intelligence estimate by the Clinton administration which foresees no ballistic missile threat to the United States for at least 15 years enraged GOP lawmakers who want to deploy a defense against a limited missile attack.

This is factual. I am one of those who was enraged because there is a lot of redundancy here. We have stood on this floor. We have tried through talk radio, through every other means possible, to convince the American people that we really do have a very serious threat out there. This estimate was made by the national intelligence estimate which only a year ago stated, as was pointed out by Senator KYL, that there is a risk out there. And it specifically talked about North Korea and the Taepo Dong II missile that would have the capability—this was a year ago—of reaching Hawaii and Alaska by the year 2000 and the Continental United States by the year 2002.

We just had a defense authorization bill that was vetoed by President Clinton. In his veto message he said we did not want to spend that money on a missile defense system to defend Americans against a missile attack. This is something that came not too long after the statement made by James Woolsey, who was the CIA Director appointed by President Clinton, that between 20 and 25 nations either have, or are developing, weapons of mass destruction, either chemical, biological or nuclear, and the missile means to deliver them. We also know that there are countries, as he pointed out, that now have this technology, and what they have they will sell.

This article goes on to report that the new national intelligence estimate indicates that it is very unlikely that any of the countries with this missile technology would sell it. I find that very difficult to believe when you look at such countries as China and North Korea. Then you look at countries in the Middle East that have an abundance of wealth due to their oil holdings—Iraq, Iran, Libya, Syria, any number of countries—and you begin to realize that they could be willing buyers, not to mention in potential nations which could be inclined to fire a missile at the United States.

I have to say this. I hesitate to stand on the floor of the Senate and make this statement, but I tend to think that this national intelligence estimate was dramatically influenced by the White House.

It was just a week ago that we heard the State of the Union Message when the President of the United States made a statement that seemingly went unnoticed when he said that we are changing the role of our military from defense to peacemaking. Earlier, in vetoing the defense authorization bill, he talked about the fact that there is a linkage between the START II arms limitation agreement that was supported and ratified by this body a couple of days ago and the 1972 ABM Treaty.

Well, I have questioned that linkage, but since the President believes it is there, I have to go back and talk about it and see how that relates to this article that came out just yesterday. The ABM Treaty was put together, it was a philosophy that was articulated for national defense to defend our strategic interests by the Nixon administration, by Dr. Henry Kissinger.

Back at that time, they formulated a plan that was called MAD, mutually assured destruction, and what we were talking about at that time was we only had two superpowers in the world. We had the U.S.S.R. and the United States of America. They said, "Well, I tell you what. You don't defend yourselves; we won't defend ourselves. If somebody shoots at us, we'll shoot back and we all die." That was fine. That was the policy. I did not agree with it at that time, but at least it was predicated on the assumption there were two superpowers in the world, and at that time it was true, the U.S.S.R. and the United States of America.

Now, in light of the statement of James Woolsey and of what our intelligence has reported to us, there are probably 25 countries now that have this power. So we are not talking about just two.

In a way, I think things were more secure back during the cold war; at least then we could identify a singular enemy. Now we do not know where it is coming from. So if the President has his way and we are to accept his idea of continuing a policy that was articulated and established back in 1972 of mutually assured destruction—assuming, of course, that Russia, which is the other party of this policy, this being the START II Treaty, if they do what they say they will do—and their performance is not very good in the past in their arms reduction commitment—but assuming that they do, then you have Russia and the United States reducing our nuclear capability at the same time there are 24 other nations out there that are not reducing theirs; they are raising theirs.

That is the situation, the environment that we find ourselves in today. I felt we could win this argument on the debate because the American people are intelligent people. There are a lot of ways of getting to the American people and getting the truth that is not filtered through the Washington, DC, media, and that is going straight on talk radio and other means.
